

EE 5370
Programming Assignment #1
Due September 10, 2019

Write a program that creates three processes to execute the following three programs with command line arguments:

1. "cat /proc/cpuinfo"
2. "echo Hello World"
3. "uname -a"

and then waits for these three processes to complete before creating a process to execute "ls -l" and immediately printing "Goodbye!" and exiting; not waiting for the last process to complete.

You can name the source file whatever you like. You will demonstrate and explain this program to the instructor during office hours on September 10th.
